

Subject: 232 heads

According to factory specs the 7.0 232 heads (used in '51 through '53) hold 56.72 cc's. The deck is .109" (+ or - .013") which comes out to almost 16 cc's. The head gasket is almost 7 cc's. The total volume for the 7.0 compression is 79.4 cc's.

The '54 heads were 7.5 to 1 (and were an option on the earlier 232's) and those heads are 50.61 cc's and the total volume is 73.3 cc's.

The 535976 heads should be milled about .060" to keep the compression decent when putting them on a 232.

I have a set of the 7.0 and also a set of the 7.5 232 heads if anyone is interested--real CHEAP! Also a 232 block fairly complete (been setting in the barn for several years) and a bare block. Anyone living close enough to central Indiana to pick them up can get a real deal.

Ted
